Ripple& Noise Test: (Twisted Pair Method 20MHZ bandwidth)

Test Method:

1.. 12# twisted pair to connect, Oscilloscope bandwidth set as 20MHz, 100M bandwidth probe, terminated with 0.1uF polypropylene capacitor and 10uF high frequency low resistance electrolytic capacitor in parallel, oscilloscope set as Sample pattern.

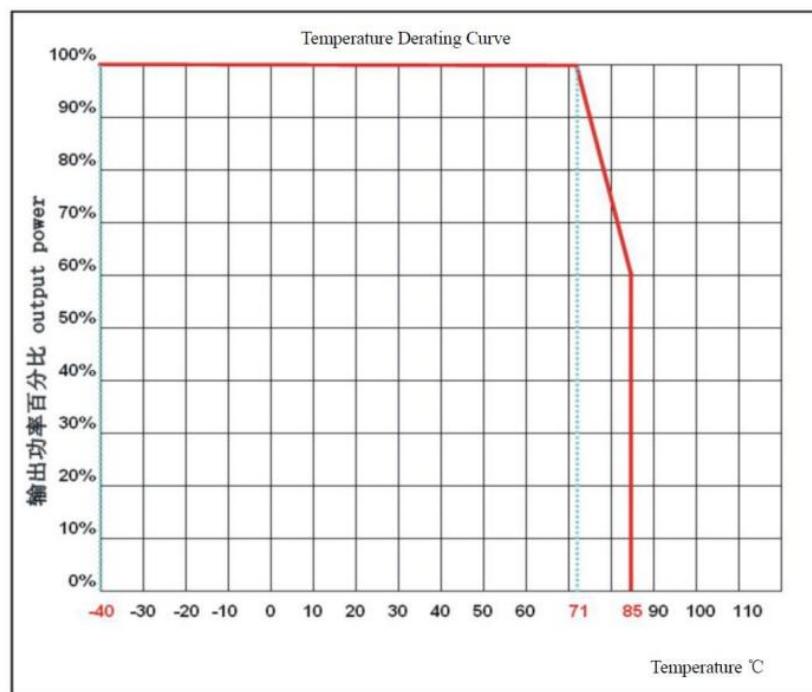

2. Input terminal connect to power supply, output terminal connect electronic load through jig plate, Use 30cm±2 cm sampling line, Power line selected from corresponding diameter wire with insulation according to the flow of output current.

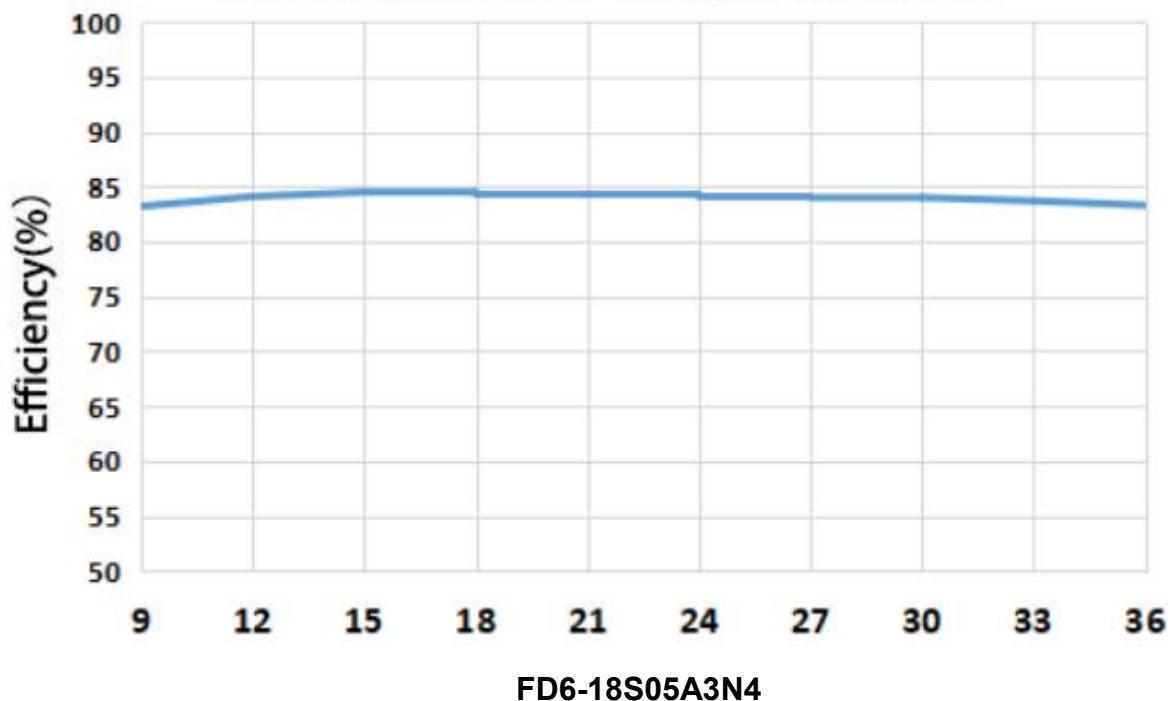

Application Reference:

- The recommended minimum load is 10% or above 3300uF high frequency low resistance electrolytic capacitor, or output ripple will rise;
- Recommend the unbalance loads of dual output to be $\leq \pm 5\%$;
- The maximum capacitive load is tested under pure resistance and full load condition;
- Our company could provide whole power supply solution, or customized made items; Due to space limitation, please contact our team for more information.
