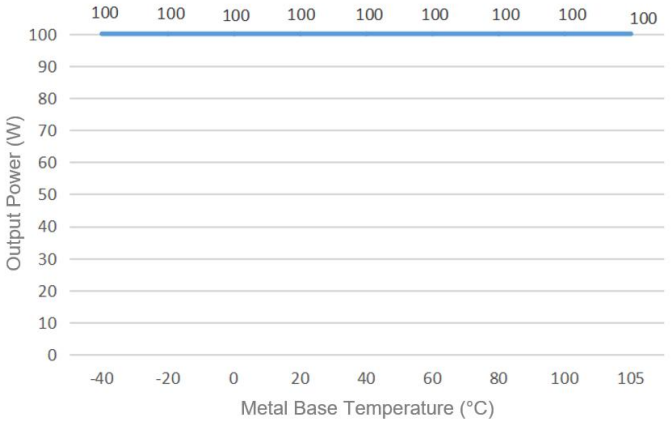
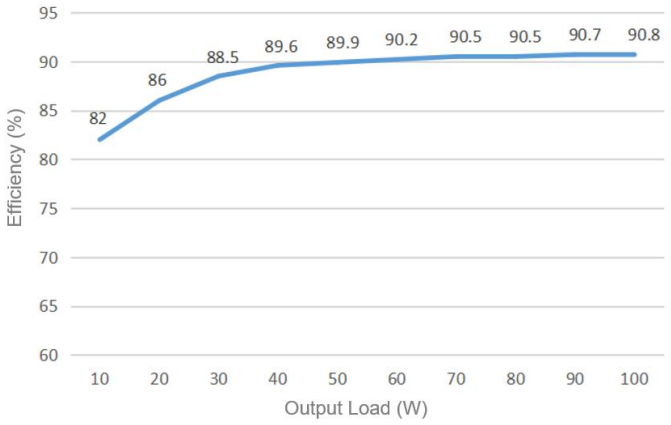
Product Characteristics Graphs





Note 1: The output power and the efficiency in the graphs have been tested with typical values.

Note 2: The data in temperature derating graph has been tested under Aipu laboratory test conditions. It is recommended to keep the temperature of the Metal Base not more than 100 °C when the converter operates at the rated load for the application.

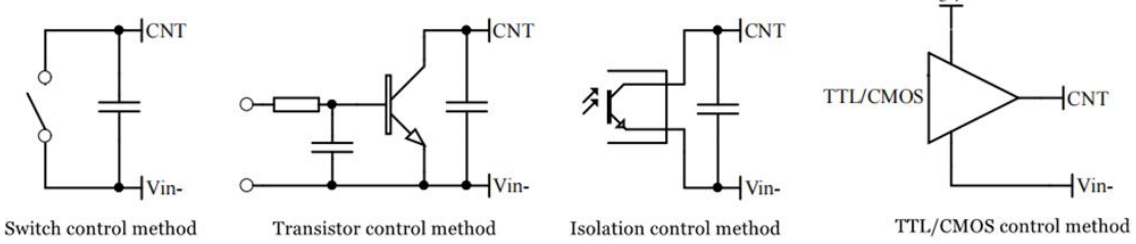
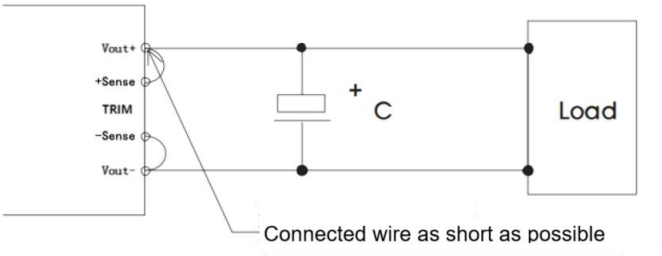
3. ON/OFF control (CNT) application



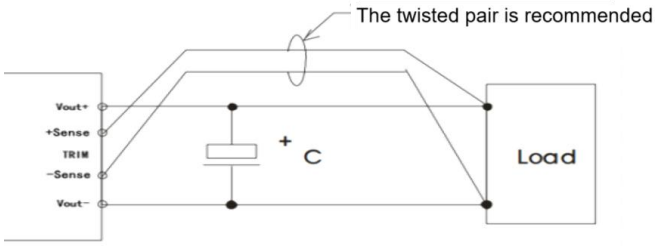
4. Application for Sense

1)**With NO distal end compensation**



Notes:
1. Vout+ & Sense+, Vout- & Sense- should be shorted when distal compensation is not needed
2. The lead wire between Vout+ and Sense+, Vout- and Sense- should be as short as possible, and close to the pins, or else the output may be unstable.

2)**With distal end compensation**



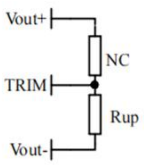
Notes:
1. The output voltage may be unstable if the compensation cables are too long.
2. The Twisted pair or shielded cables are recommended, the cable length should be as short as possible.
3. Wide copper path on PCB or thick lead wires between the power supply and the load should be used to achieve the line voltage drop <0.3V. The target is to keep output voltage within the specified range.
4. The leads wire resistance may create the output voltage oscillation or larger ripples. Please verify it before to use.

5. TRIM & TRIM resistance calculation

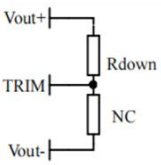
The calculation of △U and Rup & Rdown:

Rup=70/△U-20(KΩ)

Rdown=28*(24-2.5-△U)/△U-20(KΩ)



Voltage-up: Add Rup between Trim and Vout-



Voltage-down: Add Rdown between Trim and Vout+

6. This converter is not available to be connected in parallel to increase the output power. Please contact Aipu technician for this kind of requirement.
